

So Many Great Reasons To Choose Pavers

Homeowners, developers and commercial property managers agree that the benefits from pavers and segmental retaining walls over poured in concrete and mortared products are impressive:

- **Choice to Reflect Personal Style:** Pavers offer an incredible and unlimited range of choices when it comes to style, colors, textures and patterns and a great way to communicate about the character of your space. Other hardscape options are extremely limited.
- **Optimum Performance in Extreme Weather:** With extreme swings in temperature, concrete and mortared options often leave you with cracks. Pavers naturally shift to accommodate the pressures that Oklahoma weather delivers. Pavers are durable and also immediately provide the strength of hardened concrete--in excess of 10,000 psi. Pavers are regularly used on airport runways and in port areas!
- **Ease of Installation and Maintenance:** With simple base preparation, 1,000 square foot of pavers can be installed in about 2 days with no delay in use. Concrete requires extensive preparation and a long cure time -- about a week for the same area size. When maintenance is required, pavers allow you to fix the affected section only and limit closure time--something that is impossible with poured concrete.
- **Increase Property Values:** Pavers extend your outdoor living space and so add value to your home. The improved aesthetic appeal that pavers bring to your home continue to add value year after year
